

Established in 2004

Our Products

- Stretch wrap film
- Polyolefin shrink film/bag
- Adhesive tapes
- Other specialized packing material
- Packing machine

About us

Anuja Packways, an ISO 9001:2015 certified company, is a trusted Packaging company of packaging products like LD Shrink Films, PE Lamination Films, Stretch Films, Bopp Self Adhesive tape Customized Printing Tapes, POF Shrink Film, PVC labeling and much more.

Our growth, goodwill, and quality of products provided speak volumes about the company's success. Since it's beginning the company moved on to get into different products of the packaging industry and had only tasted success. Anuja Packways always believes in putting customers first. With our M.D's vision and under his leadership, Anuja Packways has now become customers first choice. We, at Anuja packways, are always in search of good and healthy business.

Our Product Range

Machine Grade Stretch film

Machine Grade: These are used in mostly in pallet wraps for exports or general transportation purposes where the film is stretched at 250% – 300%. Machine Grade Stretch Films are also made using Blow technology where the tare resistant required is extremely high and stretchability goes up to 300% – 350%.

Sizes are available from 60 mm – 1500 mm in thickness range from 15 micron – 100 microns.

Hand grade stretch film

At Anuja Packways we offer both, Hand grade and Machine Grade Stretch Films manufactured on fully automatic 5 layer and 7 layer machines.

Hand Grade: These are highly used in applications where the wrapping of the film is done manually and the stretchability required is about 100%.

Our Product Range

LD Shrink Flims

Shrink wrap, also shrink film, is a material made up of polymer plastic film. When heat is applied, it shrinks tightly over whatever it is covering. Heat can be applied with a handheld heat gun (electric or gas), or the product and film can pass through a heat tunnel on a conveyor.

Before shipping products in the market, the offered film is used for packaging cosmetics accessories, glass bottles, cans and tins.

We offer LDPE Shrink Film. LDPE is widely used in the bottle, Pharmaceuticals, Stationary, Cosmetics etc.

Sizes are available from 150 mm - 1550 mm in thickness range from 25 micron - 100 microns.

Our Product Range

Polyolefin Shrink Film

Polyolefin Shrink Film is an extremely durable and versatile 'premium' shrink film. It has taken the place of PVC in many applications and is also an FDA-approved food-safe material. Polyolefin materials are available with different characteristics, including a cross-linked film that provides high-tensile strength and incredible clarity for high-speed packaging applications. The cross-linked film also prevents buildup on sealing components of machinery.

With added strength, the ability to create longer rolls of film with thinner gauges available that allow for less roll change-over and increased efficiency and productivity. Polyolefin shrink film has excellent puncture-resistance and seal-strength, allowing for irregular-shaped items to have excellent protection throughout its supply chain life-cycle.

The versatility and fairly low-cost that POF offers for multiple machines and packaging forms make it a go-to form of protective packaging for products of any size. In some instances, POF will need perforations added to the film; tiny holes added to the film before application which allow air to escape during the shrinking process for a smooth package. Pre-perforated shrink film is available by many suppliers for this reason.

Fast Facts About POF Shrink Film

- Premium quality shrink film, high-clarity, decorative shrink wrap.
- Made of 100% recyclable materials.
- Excellent clarity and glossy shelf appearance; great for consumer products where appearance is critical (toys, games, candies, books, foods, most retail items).
- Ability to shrink quickly and completely (shrinks when heated resulting in a finished good as soon as it comes out of the shrink tunnel).
- Durable, versatile, low cost.
- Excellent for bundling multiple items together, like tissue boxes for example.
- Cross-linked POF is great for high-speed applications, providing added strength without compromising clarity and prevents build-up on sealing components.
- FDA approved for food contact.
- Excellent tensile-strength and propagation-to-tear.
- Pre-perforated POF is available and allows for even shrink surface, no air pockets.

Our Product Range

BOPP Self Adhesive Tapes

Biaxially oriented polypropylene (BOPP)

film coated with emulsion pressure.
sensitive water based acrylic adhesive.
Solid Hold BOPP Tapes is a good choice for
bundling and strapping, heavy carton
packing, general applications and for
stationery purpose also.

Standard Sizes

SIZE	PAPER CORE ID
12/18/24/36/48/72 MM	76 MM

Features

1. High Strength Adhesive.
2. Excellent Clarity and high gloss.
3. Moisture Resistant.
4. Flawless Dimensional stability and flatness.

Applications

1. Cartoon Packaging.
2. Stationery purpose.
3. Strapping.
4. Label Protection.

Technical Specification

Item	Base	Glue	Total Thickness (um)	Tack (#)	Peel Adhesion (G/in)
BT 01	23 mic BOPP Flim	WB Acrylic	36±1	≤7	400±20
BT 02	23 mic BOPP Flim	WB Acrylic	38±1	≤7	450±20
BT 03	23 mic BOPP Flim	WB Acrylic	40±1	≤7	490±20
BT 04	23 mic BOPP Flim	WB Acrylic	45±1	≤7	500±20
BT 05	23 mic BOPP Flim	WB Acrylic	49±1	≤6	550±20

Our Product Range

Air Bubble Sheet

We are an eminent organization that is engaged in manufacturing and supplying high-quality Air Bubble Sheet. The expert professionals we have hired make use of low-density polyethylene to manufacture these anti-static sheets. All these sheets are ideal for packaging fragile goods. We offer these sheets in various lengths as required by clients.

Packing Machines

Pallet Wrapping Machine

As the name implies, the concept of the Pallet Stretch Wrapping Machine entails the use of stretch-cling film. Stretch Film is stretched to the required length and width before being wrapped around the product/pallet, and the film adheres to the previous layer. This cycle is repeated until the entire product/pallet is wrapped in film.

Anuja pre stretch films are a successful approach created for the benefit of customers where we reduce stretch film consumption to 50%.

This simple and durable machine can run continuously, even in a harsh industrial environment. Since the machine's operation cycle is completely automated, it can be easily operated even by unskilled workers in this line of work!

Features & Uses

Pallet stretch wrapping machines are ideal for wrapping pallets, including high-cube containers, ready for export. Stretch film packing is also used to protect against perforation, moisture, corrosion from sea air, dust, etc.

It is also used in packing products such as textile cone yarn, light and heavy engineering goods, pharmaceutical products, electrical and home appliances, sacks containing grains, chemicals, fertilizers, tins containing – fruit pulp, paint, liquids, lubricants, and jumbo bags containing products such as activated carbon, granules, powders, and so on.

Packing Machines

Heat Shrink Tunnel

A **shrink-wrapping machine** is used to pack products by encasing them in shrink-wrap film. A thin plastic film called shrink wrap is heated to shrink firmly around the package, creating a safe and tamper-evident seal.

These shrink-wrapping machines enable logistics professionals to overcome weight and space restrictions. Several sizes and types of shrink-wrapping machines are available to meet different packaging requirements.

As one of the top manufacturers of shrink-wrapping machinery, Durapak has led the way in shrink-wrapping technology in India for the past 20 years. Our machines include Semi Auto-Sleeve Wrapper, Mono-Sleeve Wrapper, L sealer and Tunnel, and Chamber Type.

Our range is highly appreciated for its exceptional quality features, as we strive to provide our customers with products that meet international quality standards

Packing Machines

Semi Automatic L Sealer

Semiautomatic L-seal cutting machine

can convey the products automatically into shrink tunnel through conveying belt for shrink packaging after sealing & cutting. Equipped with shrink tunnel to reach higher working capacity.

Features

- There is protection mechanism for sealing knife against overheating and cutting.
- Adopt nano-fiber cutter holder and anti sticking thermostable nichrome cutter for sealing & cutting to ensure good sealing without cracking or coking.
- After sealing action, packing product goes in the shrink tunnel automatically by the conveyor belt.
- The height of conveyor belt can be adjusted with handwheel.
- Sealing & cutting time is controlled by time relay accurately.
- Double electromagnets are used to produce more pressure for sealing, which will make sealing much firmer.
- Sliding film support can keep all kinds of shrink films, up to 550mm in width.
- Upper sealing & cutting frame is controlled by return cylinder.
- SPLS 5045S adopt pneumatic device.

Applications

Semiautomatic L-seal cutting machine is suitable for shrink packing electronic products, hardware, software, foodstuff, printing, pharmacy, floor, ceramics etc in small amount.

Applied to all kinds of packing materials, such as PVC, POF, PP.

Packing Machines

Strapping Machine

Types and how does it work?

Our strapping machines include semi-automatic, automatic and pallet strapping machines. Our strapping machines stretch the PP Straps automatically to strengthen them on the product and join them by melting the straps together by applying heat to the joint.

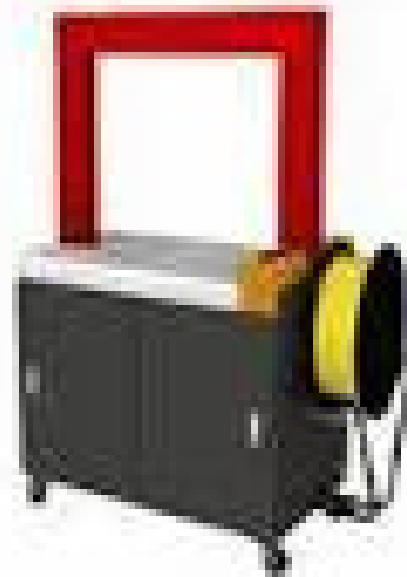

Our company deals in a wide assortment of automatic and semi-automatic machines, a revolutionary range of machines that suit the packaging requirements of different domains and industries.

Usage of strapping machines:

- Strapping machines are used for quickly wrapping small or large amounts of the product.
- They are used by several industries, which helps to cut down on time and costs by automating the process of machines.
- Industries such as food, packaging, and newspaper printing use strapping tools for their effortless use and effective productivity.
- SMBs who require machines for adequate packaging and shipping use the strapping tools.
